Esporta Cleaning system

Sports gear cleaning specialists!!

You may think your sports equipment smells like this:

But what everyone else smells is:

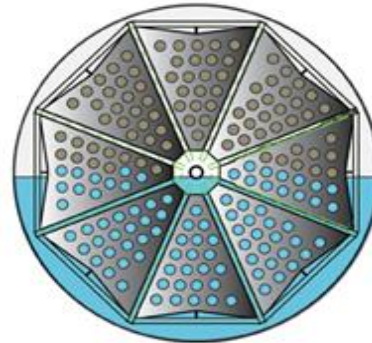

Over time buildup of bacteria, mold and fungus cause foul odors in sports equipment. Hockey equipment is the perfect breeding ground for bacteria because it doesn't get dried out properly in most cases. Bacteria can lead to infections and in some cases be very serious. These same bacteria cause the equipment to rot.

Having your gear cleaned and disinfected will help avoid rashes and skin irritation. Stink does not need to be part of your game!!

How often should your gear be cleaned?

Depends on the age of the player and how often you play. Also depends on how well you dry the equipment after use. If you start to notice the odor coming back then it's time for a deep cleaning.

The power of hydraulic pressure! This hydraulic action forces contaminants out of object being cleaned. Think of standing in a river...feel that force against you? The Esporta utilizes that same kind of force to clean virtually everything including your sports gear. Add chemicals that are specifically developed to clean and disinfect sports equipment and you now have the deepest most thorough clean possible.
